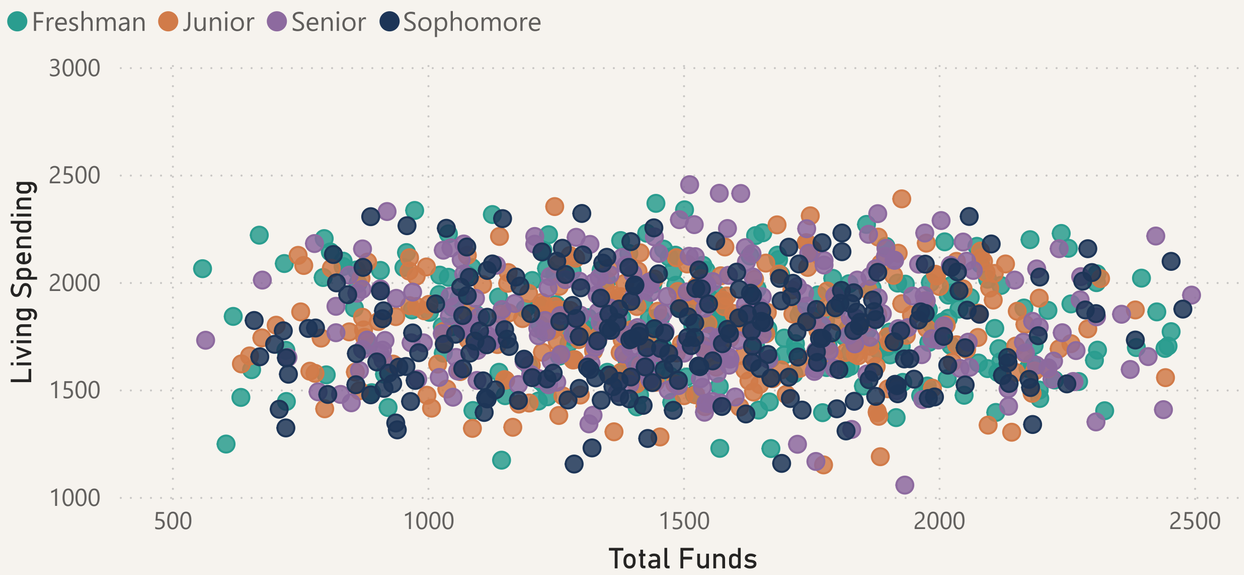
Funding vs Living Spending



Living Balance by Major and School Year

Major	Freshman	Junior	Senior	Sophomore	**Total**
Economics	-77.09	-328.88	-273.89	-264.32	**-241.75**
Engineering	-256.13	-226.92	-246.68	-274.83	**-249.92**
Computer Science	-245.13	-259.30	-279.15	-330.65	**-277.34**
Psychology	-195.33	-317.57	-378.90	-268.70	**-284.21**
Biology	-439.67	-225.38	-290.64	-221.11	**-293.05**
Total	**-251.54**	**-268.53**	**-289.20**	**-269.26**	**-269.66**

Deficit Rate & Aid Dependency by Major

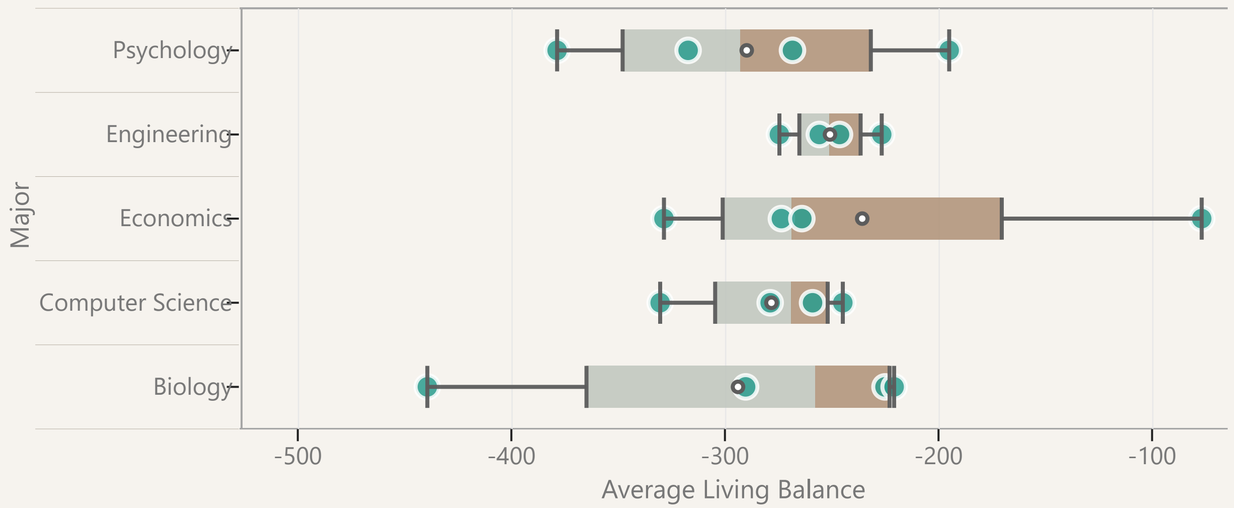
Major	Deficit Rate	Avg Aid Dependency Ratio	Avg Living Spending
Psychology	71.74 %	0.30	1794
Engineering	70.83 %	0.31	1791
Economics	70.59 %	0.32	1766
Computer Science	69.79 %	0.35	1809
Biology	69.74 %	0.31	1814
Average	**70.50 %**	**0.32**	**1795**

Segment Highlights

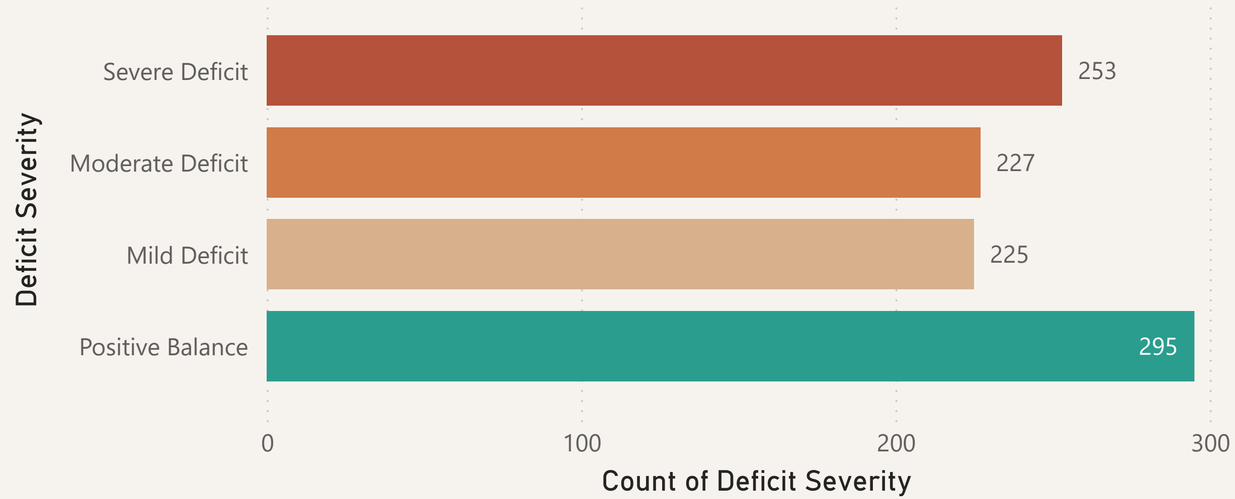
- Funding and living spending show a broad but clustered relationship across student groups.
- Seniors and some major-school year combinations show the weakest average living balances.
- Deficit rates are relatively similar across majors, suggesting that financial pressure is widespread rather than isolated to one field of study.
- Majors with higher aid dependency do not always show lower living spending, indicating that spending pressure remains a key constraint.

Financial Pressure Analysis

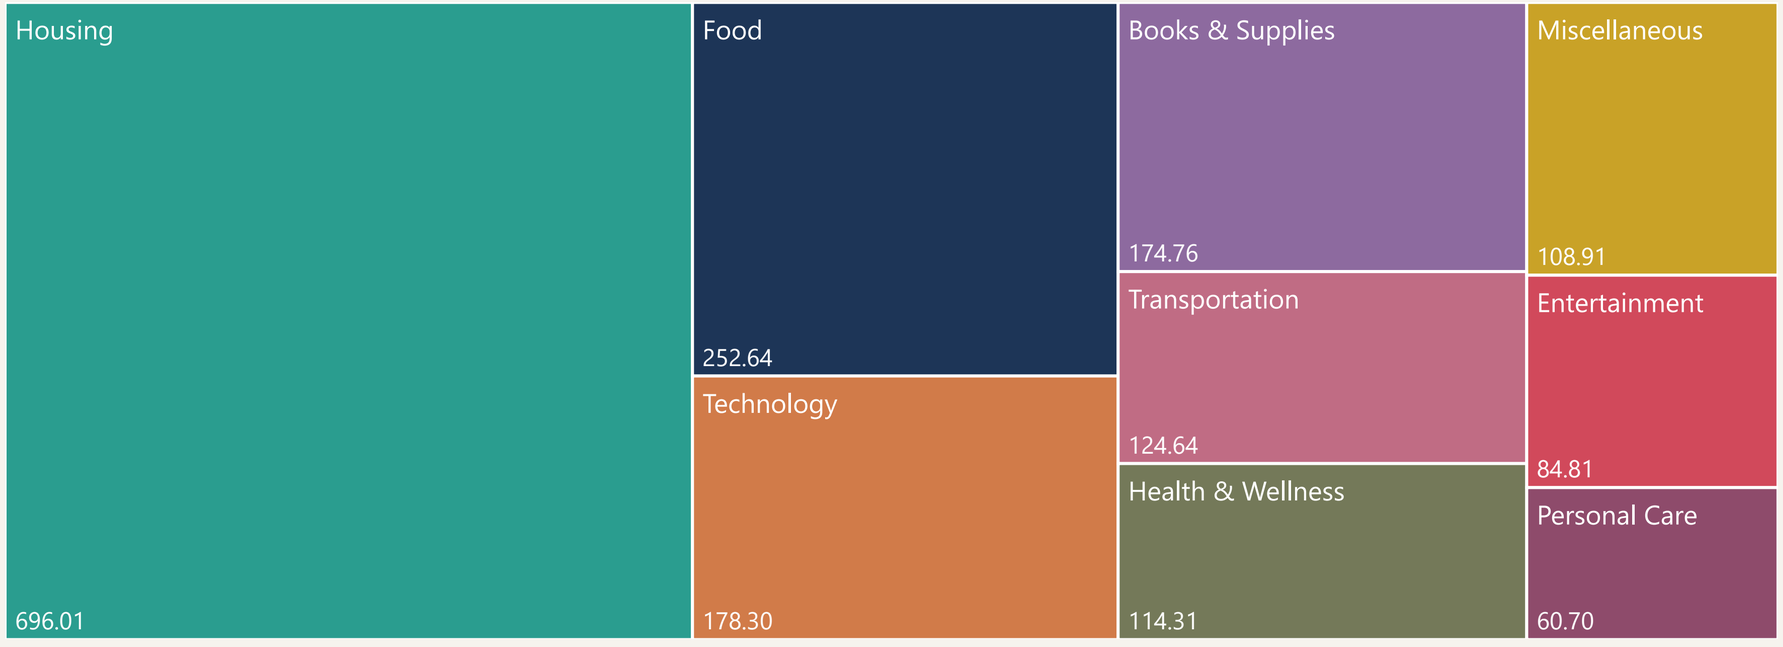
Living Balance Distribution by Major



Deficit Severity Distribution



Non-Tuition Spending Drivers



Key Findings

- Housing is the largest non tuition spending driver, followed by food and technology.
- Living balance distributions remain negative across majors, with some groups showing wider spread and deeper risk.
- Although positive balance is the largest category, many students still fall into mild, moderate, and severe deficit groups.
- Overall, financial pressure appears to be driven mainly by essential living costs rather than one segment.
